

Nature2 Spa Recipe

1. Place the Nature2 cartridge into the hot tub filter and install the filter.
(If it is the screw-on filter, take out the wall fitting and remove stem and then use the screw in filter again putting the Nature II stick inside)
2. Chlorinating Granules (dichlor) should be added once a week for normal use or twice a week for heavy use. Add the chlorine, 2 Tbsp. for a 300 and 1 Tbsp. for a 220. If you find that the tub is not clean enough you can up the chlorine by 1 Tsp. when you do the normal weekly maintenance.
3. The normal non-chlorine shock (Quick Clear) should be added at 2 oz. per week leaving the lid open for 30-45 minutes, this burns out all impurities in the form of a gas and releases them into the air and cleans up the tub. Lithium shock does not work; it makes the water cloudy.
4. When using a stain and scale remover-DO NOT- leave the Nature2 in the spa but remove it for 72 hrs and only do your stain and scale remover once a month. If you leave the stick in, it will be neutralized and no longer of any use.
5. If you have hard tubs with a skimmer just put the Nature2 cartridge in the skimmer basket and run it that way.
6. You can still use the MPS test strips but if you use the standard strips (Alk, pH, Chlorine) you will still get your readings because you are using normal chlorine.
